CSCI-432 Client-side Development
App 4

Please create a new app named app4.

Create two components in the app distinct from App.vue

The first component should display a title and image. Both the title and the image URL should be declared as state properties.

The second component should display 3 paragraphs of lorem ipsum text. The text should be stored in state properties. The component should also contain a button that when pressed changes the values of one or more state properties that are bound to attributes of the HTML elements that hold the text resulting in changes to the appearance of the text.

The app must contain proper CSS to display the content in a well structured manner.
