

CSCI-432 Client-side Development

Create a new app named **app7**. The app should display a slide show of photos from pexels.com.

The app is due Wednesday, February 8.

Code

- The slideshow should be in a separate component which is loaded in the Vue.app component.
- The slideshow should use a *lifecycle hook* to load the collection after the component has been loaded in the DOM.
- The slideshow should use a *watcher* to recognize when the data for the collection has been modified.

Visuals

- The slideshow should have *previous* and *next* buttons that iterate through the photos in the collection.
- The previous and next buttons should be disabled if the app failed to load images from pexels.com
- The previous button should be disabled if the first photo in the collection is being displayed.
- The next button should be disabled if the last photo in the collection is being displayed.
- The slideshow should display the title, name of the photographer and provide a link to the photographer's collection on pexel.com.
- The slideshow should be stylized to provide a pleasing visual experience.
